

1. Edie : Crisis team + CCO to meeting to  
there were concerns about risks of  
drug use + weapons. Teams afraid of  
visiting → MHA requested. CCO unclear  
on risks. Saw consultant to discuss  
whether referral appropriate - after  
discussion → hospital admission not  
appropriate.
- 2 a) Not just react stop + take time  
don't get hooked in to sense of  
urgency - Say I will think about  
this - unique skills: Being able to  
tolerate risk better than health colleagues  
hospital admission / detaining is  
a huge decision
- b) Value the way we talk about stuff  
together. independent & won't be pushed  
around by health professionals + families  
Strong + steadfast + assertive
- c) Successful balance to medical + trust  
model more likely to see situation  
as a whole: effects on employment, family  
stigma etc. Look at effects of admission  
eg effects of admission + meds side  
effects etc. To individuals what it  
would be like - to society: helping  
ensure risky individuals are safely contained
- 3). ~~Feeling~~ AMHP feeling well + on form.  
Canvassing views - getting all  
or angled + takes ability to  
disagree with any opposing view.  
A lively debate with colleagues

4) Better memory  
more brain cells } 1

Being able to speedily read + interpret  
information (MCA!!)

Time for prep + take in situation  
+ background.
